The spark plugs, glow plugs, and caps listed in our Catalogue can be used in the engines which we recommend in our catalogue. Recognizable mistakes, such as printing errors are subject to careful scrutiny by the user. NGK safeguards for accuracy and the mentioned characteristics in accordance with the current state of the art technology. Basic condition for this is the proper use of the NGK product. The seller's warranty period for faults in material or unsatisfactory performance is 24 months from the date of purchase, provided the prescribed interval changes from the vehicle manufacturer are adhered to. Excluded from this is normal wear and tear and any form of racing activities.

## Comments

1. This application list is only valid for type identification.
2. This catalogue supersedes all previous catalogues.
3. We do not accept any responsibility in respect of legal claims arising out of the contents of this list.
4. Spark Plug recommendations regarding FAA guidelines for aeroplane power units are not included in this edition.

## Tightening torques for spark plugs

### Torques

A torque wrench is required for the professional installation of a spark plug. Even for professionals the estimation of the tightening torque is nearly impossible.

That is because a torque can be calculated from two sizes which are multiplied by one another: the force which is applied to the respective centre of rotation and the length of the handle.

Most spark plug failures can be traced back to an incorrect tightening torque. If it is set too low, there is a risk of compression losses and overheating. A break of the insulator or middle electrode as a result of vibrations is also feasible.

If the tightening torque is set too high, the spark plug can snap off. The casing can also expand or warp. Heat dissipation zones are disrupted, overheating and melting of the electrodes or even engine damage can occur.

Cylinder head material	Spark plug with flat seat (with gasket)				Spark plug with conical seat	
	Thread diameter				Thread diameter	
	18 mm	14 mm	12 mm	10 mm	18 mm	14 mm
Cast iron head	35-45 Nm	25-35 Nm	15-25 Nm	10-15 Nm	20-30 Nm	15-25 Nm
Aluminium head	35-40 Nm	25-30 Nm	15-20 Nm	10-12 Nm	20-30 Nm	10-20 Nm

The torques depend on the cylinder head material and the thread diameter.

## Tightening torques for spark plugs

### The correct torque

For the professional installation of a glow plug, the use of a torque wrench is recommended. Even for professionals the estimation of the tightening torque is nearly impossible.

That is because a torque can be calculated from two sizes which are multiplied by one another: the force which is applied to the respective centre of rotation and the length of the handle. If the incorrect torque is applied to

a glow plug, a compression loss can result. Based on the vibrations, it is also possible in the case of ceramic glow plugs that the ceramic will break.

The application of a tightening torque which is too great, in particular, can lead to the contraction of the annular gap between the metal case and glow tube. In this case the glow plug overheats and fails.

Tightening torque for glow plugs	
Thread diameter	Tightening torque
8 mm	8-15 Nm
10 mm	15-20 Nm
12 mm	20-25 Nm
14 mm	20-25 Nm
18 mm	20-30 Nm

Tightening torque for the connecting nuts	
Thread diameter	Tightening torque
4 mm (M4)	0,8-1,5 Nm
5 mm (M5)	3,0-4,0 Nm

Glow plugs will only function faultlessly when they are screwed in with the correct torques.

# V-Line – a sales concept with many benefits

## 1. Numbering system:

Numbers from 1 to 39 make it easy to quickly find the right spark plug.

## 2. Attractive packaging:

Spontaneous buying, that increases sales.

## 3. Compact:

Less space demand by compact measurements.

## 4. High stock turnover:

39 types for 97% of all vehicles. This improves your profit.

## 5. Special trade distribution:

No competition with department stores and supermarkets.

## 6. Less costs:

Less costs for storing—more profit for you.

## 7. Protection of environment:

Higher ignition safety. Reduction in fuel consumption, exhaust emission and longer life for catalizer. More customer acceptance. Environmental carton packaging without blisterpack.

## 8. End consumer advertising:

NGK provides for increase in demand of your customers.

The complete assortment can be clearly represented in a floor display. An integrated application list makes it easy to quickly find the right spark plug.

# V-Line

## spark plugs offer benefits down the line

**NGK V-line spark plugs offer perfect ignition of the fuel/air mixture. Especially in modern low emission lean-burn engines, even under extreme operating conditions.**

### Technical Advantages

NGK Spark Plugs have a very wide heat range because they utilise superior insulator materials and a copper cored centre electrode. This ensures better cold starting and perfect ignition even under extreme engine operating conditions.

V-Line No. 1, 21, 22, 24, 27, 29

### **V-Line No. 1, 21, 22, 24, 27, 29 3 Ground Electrode Spark Plugs for VW/Audi**

NGK manufacture this type of spark plug specially for Volkswagen and Audi cars. Nearly all new models can be fitted with it (see NGK catalogue for full listing). They satisfy the service interval specified by the car manufacturer.

V-Line No. 2-12, 14-19, 28, 32,  
33, 35, 36, 38, 39

### **V-Line No. 2 - 12, 14 - 19, 28, 32, 33, 35, 36, 38, 39 NGK's patented V-grooved spark plugs**

The principle is technically simple but very effective. A V-groove is situated in the centre electrode of these V-Line spark plugs. This forces the spark to occur at the outer edge of the centre electrode where it is easier to ignite the fuel/air mixture.

In addition, the voltage required to produce a spark is reduced. These two features give the benefit of improved ignitability.

V-Line No. 20, 23

### **V-Line No. 20, 23**

The principle of the spark plug for BMW is to "catch" the current which is leaking away over the deposits and create a spark. Spark discharge occurs between insulator and ground electrode. The carbon deposits are removed and the fuel/air mixture will be ignited.

**V-Line No. 25**

NGK has developed the double platinum spark plug PTR5A-13 for FORD models powered by ZETEC engines. The benefit of the platinum electrodes is to lower the required ignition voltage. As a result it is possible to increase the gap between the electrodes to improve combustion and give good idle stability. Better

combustion also results in improved acceleration and lower emissions.

V-Line No. 25

**V-Line No. 26**

Together with FIAT, NGK has developed the spark plug BKR6EKC. The "C" identifies it as a special spark plug for engines from the FIAT Corporation. The BKR6EKC works perfectly even under the most adverse conditions – from stop, start city driving with low combustion temperatures to maximum cylinder temperature experienced

at full load. Test results show the specially designed double ground electrode plug guarantees superb ignition and satisfies Fiats service life requirements..

V-Line No. 26

V-Line No. 30

**V-Line No. 30**

This is the long-life spark plug BKR6EQUP developed in close cooperation between BMW and NGK, which is equipped with a platinum middle electrode and 4 earth electrodes together with state-of-the-art semi-surface gap spark plug.

The semi-surface gap spark plug requires a special design of the insulator tip. This ensures that the ignition spark always only jumps between the electrodes which offer the most favourable conditions for reliable ignition of the fuel/air mixture.

In view of the fact that the ignition spark slides over the insulator tip first before it can jump over the air gap between insulator tip and earth electrode, any deposits

accumulated here are removed immediately, reliably preventing any misfiring. This therefore guarantees optimum cold start behaviour at very low temperatures and greatest ignition reliability even when the vehicle is only driven for extremely short distances.

This new type of NGK spark plug is fitted in BMW engines from model year 1997. Retrospective approval has also been given for certain older BMW vehicles from model year 1987.

V-Line No. 31, 34, 37

**V-Line No. 31, 34, 37**

NGK has developed the double platinum spark plug PTR5D-10 for FORD models powered by ENDURA engines (V-Line No. 31). The benefit of the platinum electrodes is to lower the required ignition voltage. As a result it is possible to increase the gap between the electrodes to improve combustion and give

good idle stability. Better combustion also results in improved acceleration and lower emissions.

# LPG LaserLine – A product line like no other

Until now, the market has lacked a special line of spark plugs for gas engines. NGK Spark Plug Europe has filled the gap.

- For gas operated engines: LPG/CNG
- Double precious metal design: laser welded
- Special coating protects and facilitates removal
- Easy installation: present spark gap
- 95% market coverage with only 8 part numbers

# LPG LaserLine – the best for gas operated engines

**LPG LaserLine gives retailers and repair shops a product line with spark plugs developed especially for gas operated engines. For both retailers and repair shops this makes conversion and servicing not only easier, but also more reliable.**

Drivers throughout Europe who convert their cars to gas operation benefit from substantially lower fuel prices, due to the lower taxes on gas. The number of conversions is increasing from year to year. Retailers and repair shops can profit from this development.

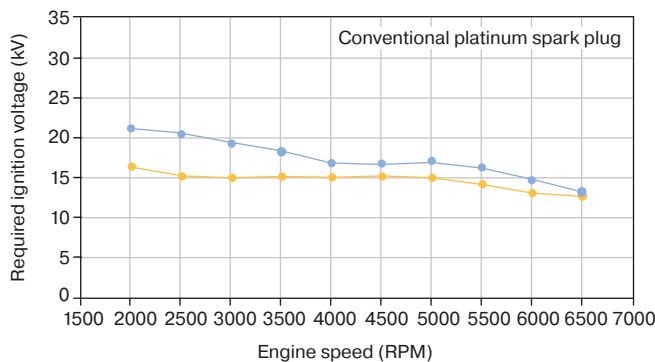

Choosing the right spark plug in the past involved many factors, which often meant extra work. Because the combustion of gas is very different from the combustion of gasoline: the gas/air mixture is more difficult to ignite. The required ignition voltage increases (see graph), together with the risk of failure for the ignition coils. Also, the gas/air mixture burns at a higher temperature.

Conventional electrode and housing materials corrode more quickly in this environment, and the spark plug also has to dissipate more heat. Until now, the best solution was to change

from standard spark plugs to precious metal spark plugs with a different heat range and to adjust the spark gap, in some cases.

**But now there is a better alternative:** special LPG LaserLine spark plugs. The product line covers more than 90 percent of conversion-capable automobiles in Europe and as many as 97 percent in some countries. Therefore, LPG LaserLine is the ideal spark plug for practically every European car that is converted.

Required ignition voltage increases in gas operated engines

Super gasoline: — Spark gap 0.80 mm  
Liquid gas (LPG): — Spark gap 0.80 mm

# LPG LaserLine – Top technology for gas operated engines

## 1. High-tech electrodes

LPG LaserLine spark plugs have an iridium-tipped centre electrode and a shell electrode with a platinum chip. These precious metal chips are attached in a specially developed laser welding process patented by NGK. The advantage: the precious metals are resistant to the unfavorable conditions in gas operated engines. The spark gap remains virtually the same throughout the entire performance range.

## 2. Individual spark gap

The ideal gap between the center electrode and shell electrode of every LPG LaserLine type is preset for gas operated engines. Manual adjustment is no longer necessary.

## 3. Optimum thermal properties

A copper core in the shell electrode of every LPG LaserLine spark plug improves the temperature discharge, which helps to regulate the higher temperatures in gas operated engines. Design properties protect these spark plugs even better against fouling.

## 4. Heat shield for the housing

A special alloy coating covers the housing of every LPG LaserLine spark plug, protecting it from the higher temperatures and the increased risk of corrosion. No other manufacturer currently offers a similar coating.

## 5. Relief for the ignition coils

Studies conducted by NGK show that the required ignition voltage in gas operated engines increases by as much as 7,000 volts – an acid test for the ignition coils. The iridium center electrode of an LPG LaserLine spark plug, only 0.6 mm in diameter, provides a counter measure, since it requires very low ignition voltage. The shape of the electrode also facilitates optimum advance of the flame front.

The iridium-tipped center electrode and the platinum chip in the shell electrode – both laser-welded – provide for maximum resistance and reliable ignition – throughout the entire performance range.

# LPG LaserLine – Optimum market coverage

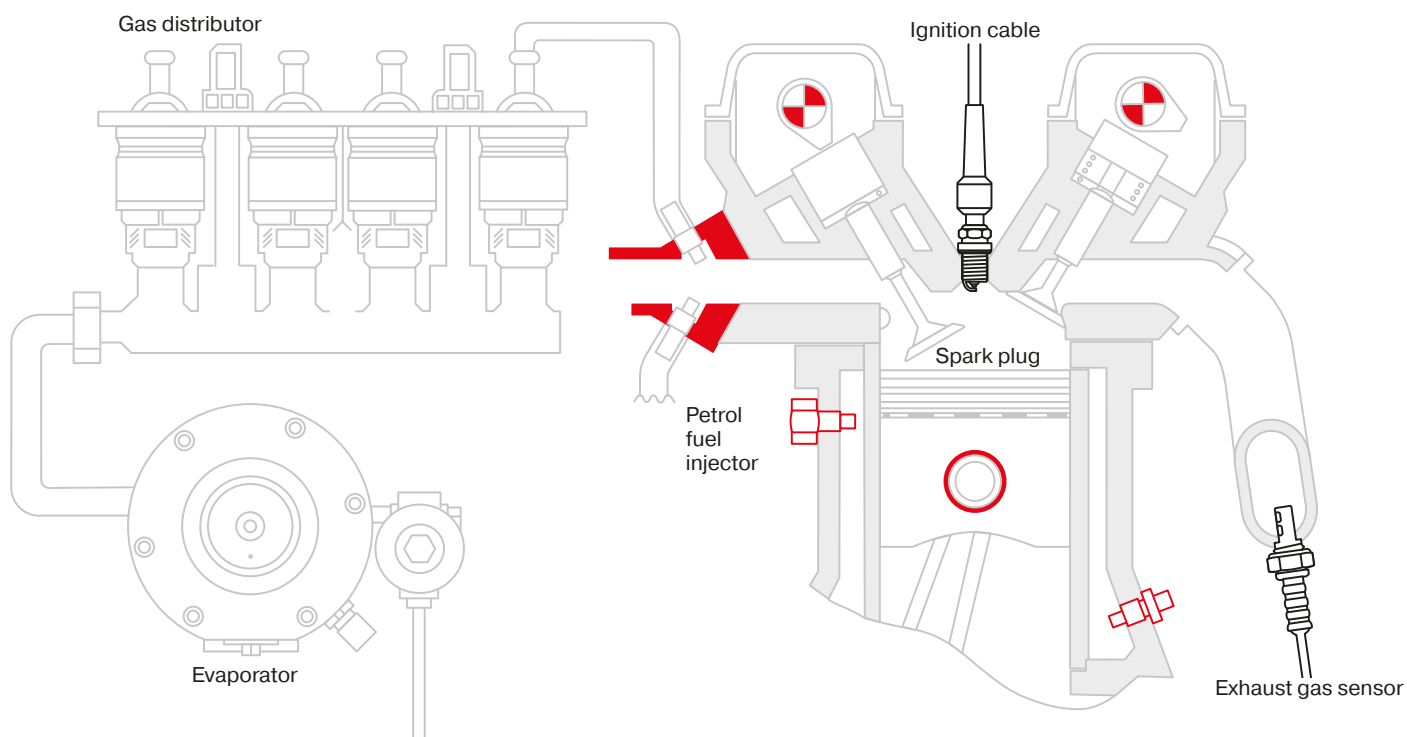

**LPG LaserLine – 8 special spark plugs for the ignition of gas/air mixtures. For more than 90 percent of all conversion-capable automobiles on the European market.**

The table shows 8 sample applications for LPG LaserLine spark plug types. All applications are listed in the NGK spark plug

catalogue, in TecDoc and in the online product finder at [www.ngk-europe.com](http://www.ngk-europe.com)

Sample applications		
LPG-type	Automobile	Engine
LPG 1	Audi A6 2.4l V6	BDV
LPG 2	Volvo 940i 2.3l	B 230 FT
LPG 3	Saab 9-5 2.3l	B235L
LPG 4	Ford Focus 1.6l	FYDA Zetec SE
LPG 5	Ford Mondeo 2.0	CJBA Duratec HE
LPG 6	VW Multivan T5 2.8l	AXK
LPG 7	Peugeot 307 1.6l	TU5 JP4 NFU
LPG 8	Fiat Grande Punto 1.4	350A1000

## How a gas-powered engine functions

# D-POWER<sup>NGK</sup>

## D-Power: Current diesel technology in one assortment

The D-Power glow plug assortment comprises 62 glow plugs and always offers the ideal solution for nearly every vehicle application. In the process, around 90 % of the European diesel vehicle population is covered.

D-Power glow plugs ensure a fast and environmentally-friendly cold start even at the lowest outside temperatures. This is also because they provide the know-how of a leading glow plug supplier: In addition to standard metal rod glow plugs and ceramic

glow plugs, the assortment includes the NHTC glow plug with fully ceramic heating element, which is used by VW, Mercedes and Mitsubishi in series production. Glow plugs with Advanced Quick Glow System (AQGS) are also a part of the D-Power range. This technology is used in series production by manufacturers such as Fiat.

The time-tested short numbering system of NGK ensures that an optimal glow plug for every vehicle can be found quickly and re-ordered as needed.

### The assortment at a glance:

- Market coverage of around 90 %
- For nearly all vehicle models in TecDoc
- Quick location of the right glow plug thanks to the NGK short numbering system
- Easy stockkeeping and updating
- Ceramic and metal rod glow plugs in one assortment
- Many original equipment glow plugs

## Ceramic glow plugs

As opposed to a metal rod glow plug, the heating coil of a ceramic glow plug has an especially high melting point. It is also sheathed in silicon nitrite, an extremely rugged ceramic material. The combination of the heating coil and ceramic sheath enable higher temperatures and extremely short preheating times due to excellent thermal conductivity. Also, ceramic glow plugs have a more compact design. This is important, because there is very little free space in today's engines. In an SRC (Self Regulating Ceramic) glow plug the heating element is made of ceramic with a sintered metal heating coil. An HTC (High Temperature Ceramic) or NHTC (New High Temperature Ceramic) glow plug has a heating element and a heater made of ceramic.

The NHTC ceramic glow plug was specially developed by NGK to enable automobile manufacturers to comply with the Euro 4 and Euro 5 emissions standards. One of the goals of these standards is to reduce the compression ratio in diesel engines. NHTC glow plugs reach a temperature of 1,000 °C in less than two seconds and can after-glow for more than ten minutes at temperatures of up to 1,350 °C. Optimal combustion is assured even with low compression ratios. In addition, the NHTC glow plug can glow intermediately to prevent cooling of the particle filter in deceleration phases.

### **Ceramic glow plugs: the technical optimum**

For more than 20 years automobile manufacturers have been using NGK glow plugs as standard equipment. But can these glow plugs be replaced with comparatively less expensive metal glow plugs?

The answer: many things "can" be done, of course. The question is, what risk is involved. In cars that have NGK ceramic glow plugs installed at the factory, only NGK ceramic glow plugs should be used when it comes time to replace the glow plugs.

The reason: These glow plugs were developed in-house for the respective engines. Ceramic glow plugs from NGK guarantee a long service life and ensure a reliable and fast ignition, even at the lowest outside temperatures. At the same time, they reduce harmful emissions. Although they at first appear to be somewhat more expensive than metal glow plugs, one should consider the following: Metal glow plugs can make it difficult to start a car at extremely cold sub-zero temperatures.

### **Tip!**

When changing to metal glow plugs, all of the glow plugs have to be replaced, including those that are intact.

※ 1 ISO : The length from gasket to terminal of ISO type spark plugs is 50.5mm which is 2.5mm shorter than BCP-E or BC-E type spark plugs.

※ 2 It's necessary to use special plug caps(Please refer to page 6)

※ 3 Resistor spark plugs are recommended for cars originally equipped with resistor spark plugs.

When nonresistor spark plugs are installed in such cars, there is some possibility that the electric devices in the car, such as the audio system or the engine management system, would be affected by noise.

## Drehmomente Zündkerzen

### Das richtige Drehmoment für Zündkerzen

Für die fachgerechte Montage einer Zündkerze ist ein Drehmomentschlüssel erforderlich. Denn selbst für Werkstattprofis ist das "Schätzen" des Anzugsdrehmomentes nahezu unmöglich.

Das liegt daran, dass sich ein Drehmoment aus zwei Größen errechnet, die miteinander multipliziert werden: der Kraft, die auf den jeweiligen Drehpunkt einwirkt, und der Länge des Hebels.

Die meisten Zündkerzenausfälle gehen auf ein falsches Anzugsdrehmoment zurück. Wird es zu niedrig gewählt, drohen Kompressionsverluste und Überhitzung. Auch ein Bruch von Isolator oder Mittelelektrode infolge von Vibrationen ist denkbar.

Wird das Drehmoment zu hoch gewählt, kann es zum Abreißen der Zündkerze führen. Auch kann das Gehäuse sich dehnen oder verdrehen. Die Wärmeabflusszonen werden gestört, es drohen Überhitzung und Verschmelzung der Elektroden bis hin zum Motorschaden.

Zylinderkopf-Material	Zündkerze mit flachem Sitz (mit Dichtung)				Zündkerze mit konischem Sitz	
	Gewindedurchmesser				Gewindedurchmesser	
	18 mm	14 mm	12 mm	10 mm	18 mm	14 mm
Gusseisenkopf	35-45 Nm	25-35 Nm	15-25 Nm	10-15 Nm	20-30 Nm	15-25 Nm
Aluminiumkopf	35-40 Nm	25-30 Nm	15-20 Nm	10-12 Nm	20-30 Nm	10-20 Nm

Die Drehmomente sind vom Zylinderkopfmateriale und dem Gewindedurchmesser abhängig.

## Drehmomente Glühkerzen

### Das richtige Drehmoment für den Einbau von Glühkerzen

Für die fachgerechte Montage einer Glühkerze empfiehlt sich die Verwendung eines Drehmomentschlüssels. Denn selbst für Werkstattprofis ist das „Schätzen“ des Anzugsdrehmomentes nahezu unmöglich.

Das liegt daran, dass sich ein Drehmoment aus zwei Größen errechnet, die miteinander multipliziert werden: der Kraft, die auf den jeweiligen Drehpunkt einwirkt, und der Länge des Hebels.

Wird bei einer Glühkerze ein falsches Drehmoment angewendet, kann es zu Kompressionsverlusten kommen. Aufgrund von Vibrationen ist bei keramischen Glühkerzen außerdem ein Bruch der Keramik möglich.

Auch kann insbesondere die Verwendung eines zu großen Zusammenziehen des Ringspalts zwischen Metallgehäuse und Glührohr führen. In diesem Fall überhitzt die Glühkerze und fällt aus.

Anzugsdrehmomente von Glühkerzen	
Gewindedurchmesser	Anzugsdrehmoment
8 mm	8-15 Nm
10 mm	15-20 Nm
12 mm	20-25 Nm
14 mm	20-25 Nm
18 mm	20-30 Nm

Anzugsdrehmomente von Anschlussmuttern	
Gewindedurchmesser	Anzugsdrehmoment
4 mm (M4)	0,8-1,5 Nm
5 mm (M5)	3,0-4,0 Nm

Nur wenn Glühkerzen mit den richtigen Drehmomenten eingeschraubt werden funktionieren diese einwandfrei

# V-Line – ein Verkaufskonzept mit vielen Vorteilen

## 1. Nummernsystem

Zahlen von 1 bis 39 ermöglichen das schnelle Auffinden der richtigen Zündkerze.

## 2. Kompakt

Weniger Platzbedarf durch kompakte Abmessungen. Dadurch mehr Raum für zusätzliche Produkte.

## 3. Attraktive Verpackung

Signalcharakter führt zu Spontankäufen und forciert den Abverkauf.

## 4. Hohe Umschlag-Geschwindigkeit

Abdeckung für 95 % aller Pkw. Das verbessert Ihre Rendite.

## 5. Fachhandelsvertrieb

Kein Wettbewerb mit Kaufhäusern und Supermärkten.

## 6. Kostendämpfend

Geringe Lagerhaltungskosten optimieren Ihren Gewinn.

## 7. Umweltfaktor

Höhere Zündsicherheit. Dadurch Reduzierung von Kraftstoffverbrauch, Schadstoffausstoß und längere Lebensdauer für Katalysator. Dadurch hohe Kundenakzeptanz. Umweltfreundliche Kartonverpackung ohne Blister.

## 8. Endverbraucherwerbung

NGK sorgt für Nachfragesteigerung bei Ihren Kunden.

Das gesamte V-Line-Sortiment kann im Bodenaufsteller repräsentativ und übersichtlich angeboten werden. Eine integrierte Zuordnungsliste macht die Wahl der richtigen Zündkerze zum Kinderspiel!

# V-Line Zündkerzen bieten Vorteile auf der ganzen Linie

**Besonders bei modernen Motoren, deren Luft-/Kraftstoffgemisch aus Gründen der Schadstoff-Reduzierung sehr mager eingestellt wird, ist durch die NGK-Konstruktion eine absolut zuverlässige Gemischentflammung jederzeit gewährleistet, auch unter extremen Betriebsbedingungen!**

## Technische Vorteile

Die Verwendung von speziellem Isolatormaterial ermöglicht es, die Isolatorspitze zu verlängern. Außerdem wurde der Kupferkern im Innern der Mittelelektrode optimiert. Beide Maßnahmen führen zu noch besserer Wärmeableitung. Der dadurch vergrößerte Wärmebereich gewährleistet sicheren Start und zuverlässiges Zündverhalten auch unter extremen Motor- und Betriebsbedingungen.

### **V-Line Nr. 1, 21, 22, 24, 27, 29 Zündkerze mit 3 Masse-**

**Elektroden für die VW Gruppe**  
Speziell für die Fahrzeuge der VW Gruppe stellt NGK diesen Zündkerzentyp her.

V-Line Nr. 1, 21, 22, 24, 27, 29

### **V-Line Nr. 2 - 12, 14 - 19, 28, 32, 33, 35, 36, 38, 39**

Technologisch ist das Prinzip genial einfach – aber überaus wirksam: In der Mittelelektrode der V-Line-Zündkerze ist eine V-Einkerbung eingebracht. Patent-Nr. DE 2922 305 C2  
Dadurch springt der Zündfunke an der Außenkante der Mittelelektrode über. An dieser Stelle befindet

sich mehr zündfähiges Kraftstoff-/Luftgemisch als direkt zwischen den Elektroden. Und: Der Zündspannungsbedarf ist geringer. Somit erhöht sich die Zündsicherheit!

V-Line Nr. 2-12, 14-19, 28, 32, 33, 35, 36, 38, 39

### **Die V-Line Nr. 20, 23**

Das Prinzip dieser Zündkerzen für BMW: Im Falle von leitenden Ablagerungen auf der Isolatorspitze wird die abfließende Zündspannung „abgefangen“ und es entsteht ein Zündfunke zwischen Isolator und Masse-Elektrode. Hierbei werden die russartigen Ablagerungen abgetragen und es kommt zur sicheren Entflammung des Kraftstoff-Luft-Gemisches.

V-Line Nr. 20, 23

### Die V-Line Nr. 25

Für FORD-Modelle die mit ZETEC Motoren ausgerüstet sind, wurde von NGK die Doppel-Platin-Zündkerze PTR5A-13 entwickelt. Die Vorteile der Platin-Elektroden zeichnen sich durch einen geringeren Zündspannungsbedarf aus. Daher konnte der Elektrodenabstand vergrößert werden, um eine stabile Verbrennung und gute Leerlaufqualität zu erreichen.

Durch die verbesserten Entflammungseigenschaften können sowohl die Roh-Emissionen als auch das Drehmoment optimiert werden.

V-Line Nr. 25

### Die V-Line Nr. 26

In Zusammenarbeit mit FIAT wurde von NGK die Zündkerze BKR6EKC entwickelt. Das „C“ weist auf eine Spezial-Zündkerze für Motoren aus dem FIAT Konzern hin. Die BKR6EKC arbeitet auch unter schwierigsten Betriebsbedingungen einwandfrei – Stop and Go bei niedrigen Verbrennungstemperaturen bis hin zu höchster

Temperaturbelastung des Motors bei Vollast. Die Testergebnisse zeigen, dass das besondere Design der Zwei-Masse-Elektroden höchste Zündfähigkeit sowie die geforderte Lebensdauer der Zündkerzen innerhalb des von Fiat empfohlenen Zündkerzen-Wechselintervalls garantiert.

V-Line Nr. 26

V-Line Nr. 30

### Die V-Line Nr. 30

Hierbei handelt es sich um die in enger Zusammenarbeit zwischen BMW und NGK entwickelte Langzeitzündkerze BKR6EQUP, ausgestattet mit einer Platinmittelelektrode und 4-Masseelektroden sowie modernster Halbleitfunktentechnik.

Die Anwendung der Halbleitfunktentechnik erfordert ein spezielles Design der Isolatorspitze. Hierdurch wird sichergestellt, dass der Zündfunke immer nur zwischen den Elektroden überspringt, an denen die für eine sichere Entflammung des Kraftstoff-Luftgemisches günstigsten Bedingungen herrschen. Da jeder Zündfunke zunächst über die Isolatorspitze gleitet, bevor er den Luftspalt zwischen Isolatorspitze und Masseelektrode überspringen kann, werden eventuell dort angesammelte Ablagerungen

sofort beseitigt und Zündaussetzer sicher verhindert. Ein optimales Kaltstartverhalten bei Tiefsttemperaturen und größte Zündsicherheit auch bei extremem Kurzstreckenverkehr sind daher garantiert. Die hervorragenden, optimierten Entflammungseigenschaften der neuen Zündkerze sichern ein stabiles Leerlauf- und Beschleunigungsverhalten des Motors. Durch sicheres Entflammen, selbst unter kritischen Betriebspunkten, ist ein zusätzlicher Schutz für den Katalysator vorhanden, so dass eine hohe Langzeitstabilität der Emissionen sichergestellt ist. Dieser neue Zündkerzentyp wird ab dem Modelljahr 1997 in BMW-Motoren Verwendung verbaut. Eine rückwirkende Freigabe für bestimmte ältere BMW Fahrzeuge ab Baujahr 1987 wurde ebenfalls erteilt.

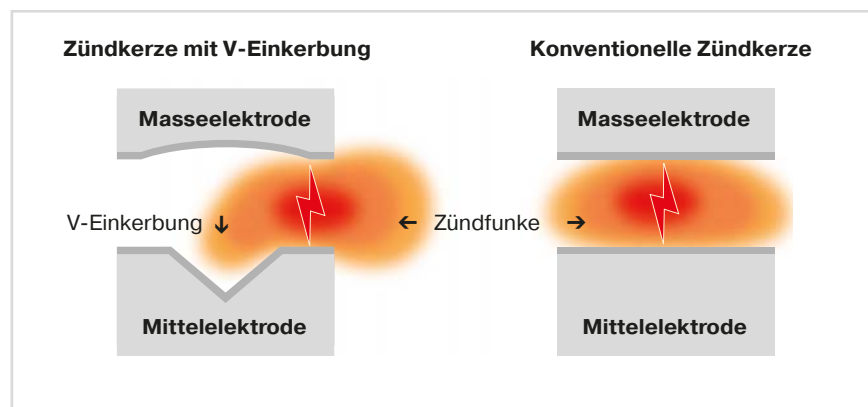

V-Line Nr. 31, 34, 37

### Die V-Line Nr. 31, 34, 37

Für FORD-Modelle die mit ENDURA Motoren ausgerüstet sind, wurde von NGK die Doppel-Platin-Zündkerze PTR5D-10 entwickelt (V-Line Nr. 31). Die Vorteile der Platin-Elektroden zeichnen sich durch einen geringeren Zündspannungsbedarf aus. Daher konnte der Elektrodenabstand vergrößert werden, um eine

stabile Verbrennung und gute Laufqualität zu erreichen. Durch die verbesserten Entflammungseigenschaften können sowohl die Roh-Emissionen als auch das Drehmoment optimiert werden.

# LPG LaserLine – Ein Sortiment wie kein zweites.

Ein spezielles Zündkerzensortiment für gasbetriebene Motoren (LPG/CNG) suchte man im Markt bislang vergebens. NGK Spark Plug Europe hat die Lücke gefüllt.

- Für gasbetriebene Motoren: LPG und CNG
- Doppel-Edelmetallausführung: Lasergeschweisst
- Spezielle Beschichtung: Schützt und erleichtert Ausbau
- Problemloser Einbau: Elektrodenabstand korrekt voreingestellt
- Mit nur 8 Typen: 95% Marktabdeckung

# LPG LaserLine – das Beste für gasbetriebene Motoren

**Mit LPG LaserLine steht Handel und Werkstatt erstmals ein Sortiment zur Verfügung, dessen Zündkerzen eigens für den Gasbetrieb entwickelt wurden. Für Handel und Werkstatt bedeutet das: Umrüstung und Service werden spürbar erleichtert und sicherer.**

Wer sein Auto auf den Betrieb mit Gas umrüsten lässt, profitiert europaweit von erheblich günstigeren Kraftstoffpreisen aufgrund der niedrigeren Besteuerung von Gas. Die Anzahl der Umrüstungen steigt daher von Jahr zu Jahr. Handel und Werkstatt können von dieser Entwicklung profitieren.

Bei der Wahl der richtigen Zündkerze galt es bislang allerdings, viele Faktoren im Auge zu behalten – was oft mit Mehrarbeit verbunden war. Denn die Verbrennung von Gas unterscheidet sich erheblich von der Verbrennung von Benzin: das Gas-Luft-Gemisch ist schwerer zu entflammen.

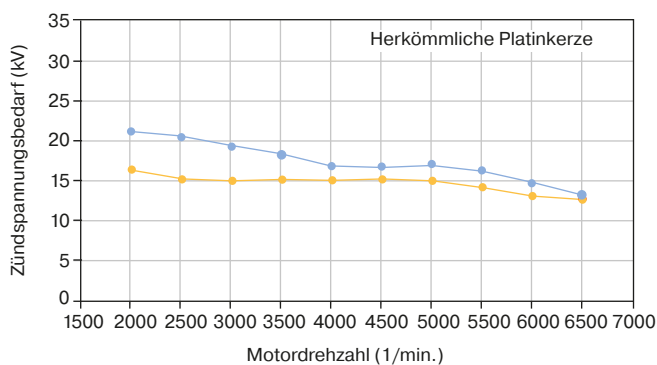

Der Zündspannungsbedarf steigt (siehe Grafik) und damit das Ausfallrisiko der Zündspulen. Hinzu kommt, dass das Gas-Luft-Gemisch heißer verbrennt.

Herkömmliche Elektroden- und Gehäusematerialien korrodieren in dieser Umgebung schneller, außerdem muss die Zündkerze mehr Hitze ableiten. Als beste

Lösung galt bislang, von Standard-Zündkerzen auf Edelmetall-Zündkerzen mit anderem Wärmewert umzustellen und in Einzelfällen den Elektrodenabstand anzupassen.

**Doch nun gibt es eine bessere Alternative:** die Spezial-Zündkerzen des **LPG LaserLine** Sortiments. Das Sortiment deckt mehr als 90 Prozent der umrüstfähigen Fahrzeuge in Europa ab, in einzelnen Ländern sogar bis zu 97 Prozent. Somit bietet **LPG LaserLine** eine ideale Zündkerze für annähernd jedes europäisches Auto, das umgerüstet wird.

Zündspannungsbedarf steigt im Gasbetrieb

Super Benzin: —●— Elektrodenabstand 0,80 mm  
Flüssiggas (LPG): —●— Elektrodenabstand 0,80 mm

# LPG LaserLine – Spitzentechnik für den Gasbetrieb

## 1. Hightech-Elektroden

**LPG LaserLine** Zündkerzen verfügen über eine Mittelelektrode mit Iridiumspitze und eine Masseelektrode mit Platin-Chip. Diese Edelmetall-Chips werden in einem aufwendigen und eigens von NGK patentierten Verfahren mittels Laser eingearbeitet. Der Vorteil: Die Edelmetalle widerstehen den ungünstigeren Bedingungen im Gasbetrieb. Der Elektrodenabstand bleibt über die gesamte Laufleistung annähernd gleich.

## 2. Individueller Elektrodenabstand

Bei jeder **LPG LaserLine** Type wurde der für den Gasbetrieb ideale Abstand zwischen Mittel- und Masseelektrode voreingestellt. Das manuelle Anpassen entfällt also.

## 3. Optimales Wärmeverhalten

Ein Kupferkern in der Masseelektrode jeder **LPG LaserLine** Zündkerze verbessert den Temperaturabfluss und hilft so, das höhere Temperaturniveau bei der Gasverbrennung optimal zu regulieren. Konstruktive Eigenschaften schützen diese Zündkerzen noch besser vor einer Verrußung.

## 4. Hitzeschild fürs Gehäuse

Eine Beschichtung aus einer speziellen Legierung bedeckt das Gehäuse jeder **LPG LaserLine** Zündkerze. So ist es vor den höheren Temperaturen beziehungsweise der höheren Korrosionsgefahr geschützt. Eine ähnliche Beschichtung kann derzeit kein anderer Hersteller auf dem Markt bieten.

## 5. Entlastung der Zündspulen

Untersuchungen von NGK haben bewiesen: Im Gasbetrieb steigt der Zündspannungsbedarf um bis zu 7.000 Volt an – ein Härtestest für die Zündspulen. Die lediglich 0,6 mm starke Iridium-Mittellektrode einer **LPG LaserLine** Zündkerze wirkt dem entgegen. Sie kommt mit besonders wenig Zündspannung aus. Außerdem begünstigt ihre Form die optimale Ausbreitung der Flammenfront.

Die Mittelelektrode mit Iridium-Spitze und der Platinchip in der Masseelektrode – beide lasergeschweißt – sorgen für höchste Widerstandsfähigkeit und Zündsicherheit – über die gesamte Laufleistung.

# LPG LaserLine – Optimale Marktabdeckung

**LPG LaserLine – acht Spezialzündkerzen für die Entzündung von Gas-Luft-Gemischen. Für mehr als 90 Prozent aller umrüstfähigen Fahrzeuge im europäischen Markt.**

Die Tabelle zeigt Ihnen beispielhafte Anwendungsmöglichkeiten von LPG LaserLine Zündkerzen-Typen. Alle Anwendungen finden

Sie im NGK Zündkerzenkatalog, in TecDoc oder im Online-Produktfinder unter [www.ngk.de](http://www.ngk.de)

Anwendungsbeispiele		
LPG-Type	Fahrzeug	Motor
LPG 1	Audi A6 2.4l V6	BDV
LPG 2	Volvo 940i 2.3l	B 230 FT
LPG 3	Saab 9-5 2.3l	B235L
LPG 4	Ford Focus 1.6l	FYDA Zetec SE
LPG 5	Ford Mondeo 2.0	CJBA Duratec HE
LPG 6	VW Multivan T5 2.8l	AXK
LPG 7	Peugeot 307 1.6l	TU5 JP4 NFU
LPG 8	Fiat Grande Punto 1.4	350A1000

## Funktionsweise eines gasbetriebenen Motors

# D-POWER<sup>NGK</sup>

## D-Power: Aktuelle Dieseltechnologie in einem Sortiment

Das Glühkerzen-Sortiment bietet für nahezu alle Fahrzeuganwendungen stets eine ideale Lösung. Damit werden rund 90 % des europäischen Dieselfahrzeug-Bestandes abgedeckt.

D-Power Glühkerzen sorgen für einen schnellen und umweltfreundlichen Kaltstart selbst bei niedrigsten Außentemperaturen. Dies auch, weil sie das Know-how eines führenden Glühkerzen-Lieferanten bieten:

So findet sich im Sortiment neben Standard-Metallstabglühkerzen und Keramikglühkerzen beispielsweise die NHTC-Glühkerze mit vollkeramischem Heizelement, die von VW, Mercedes und Mitsubishi in Serie genutzt wird. Auch Glühkerzen mit Advanced Quick Glow System (AQGS) sind Teil der D-Power Range. Diese Technik wird etwa von Fiat in Serie eingesetzt.

Das bewährte Kurznummernsystem von NGK sorgt dabei dafür, dass für jedes Fahrzeug schnell eine optimale Glühkerze gefunden und bei Bedarf nachbestellt ist.

### Das Sortiment in Kürze:

- Marktabdeckung von rund 90 %
- Für nahezu alle Fahrzeugmodelle in TecDoc
- Schnelles Auffinden der passenden Glühkerze dank NGK Kurznummernsystem
- Einfache Bevorratung und Lagerpflege
- Keramik- und Metallstabglühkerzen in einem Sortiment
- Viele Glühkerzen aus der Erstausrüstung

## Keramikglühkerzen

Im Gegensatz zu einer Metallstabglühkerze besitzt die Heizwendel einer Keramikglühkerze einen besonders hohen Schmelzpunkt. Sie ist außerdem von Silikon-Nitrit umschlossen, einem extrem widerstandsfähigen, keramischen Werkstoff. Das Zusammenspiel von Heizwendel und Keramikmantel ermöglicht höhere Temperaturen und extrem kurze Vorglühzeiten dank hervorragender Wärmeleitfähigkeit. Außerdem können Keramikglühkerzen schmaler ausgelegt werden. Das ist wichtig, weil in modernen Motoren besonders wenig Platz zur Verfügung steht.

Bei einer SRC (Self Regulating Ceramic) Glühkerze besteht das Heizelement aus Keramik mit einer eingesinterten metallischen Heizwendel. Eine HTC (High Temperature Ceramic) bzw. NHTC (New High Temperature Ceramic) Glühkerze verfügt über ein Heizelement und einen Heizer aus Keramik.

Die NHTC-Keramikglühkerze hat NGK eigens entwickelt, um Automobilherstellern die Einhaltung der Euro 4 und Euro 5 Abgasnormen zu ermöglichen. Eines der Ziele der Norm ist, das Verdichtungsverhältnis bei Dieselmotoren herabzusetzen. NHTC-Glühkerzen erreichen in weniger als 2 Sekunden 1.000 °C und können mehr als 10 Minuten bei Temperaturen von bis zu 1.350 °C nachglühen. Selbst bei niedrigen Kompressionsverhältnissen ist eine optimale Entflammung gewährleistet. Darüber hinaus kann die NHTC-Glühkerze gezielt zwischenglühen, um in Schubphasen ein Auskühlen des Partikelfilters zu verhindern.

### **Keramische Glühkerzen: Das technische Optimum**

Seit mehr als 20 Jahren setzen Autohersteller keramische Glühkerzen von NGK in Serie ein. Doch kann man diese Glühkerzen gegen vergleichsweise günstigere Metallglühkerzen austauschen? Die Antwort: Natürlich „kann“ man vieles machen. Die Frage ist nur, welches Risiko man eingeht.

Wo ab Werk keramische Glühkerzen von NGK zu finden sind, sollten diese im Servicefall auch nur gegen keramische Glühkerzen von NGK ausgetauscht werden.

Der Grund: Diese Glühkerzen wurden eigens für die entsprechenden Motoren entwickelt. Keramische Glühkerzen von NGK garantieren eine lange Lebensdauer und stellen eine zuverlässige und schnelle Entflammung selbst bei niedrigsten Außentemperaturen sicher. Gleichzeitig sorgen sie für weniger schädliche Abgase. Zwar sind sie vordergründig betrachtet etwas teurer als Metallglühkerzen, aber: Metallglühkerzen können in den entsprechenden Motoren bei extremen Minusgraden zu Startproblemen führen.

### **Hinweis!**

Bei einem Umstieg auf Metall müssen alle Glühkerzen ausgetauscht werden – auch intakte.

※ 1 ISO : The length from gasket to terminal of ISO type spark plugs is 50.5mm which is 2.5mm shorter than BCP-E or BC-E type spark plugs.

※ 2 It's necessary to use special plug caps(Please refer to page 6)

※ 3 Resistor spark plugs are recommended for cars originally equipped with resistor spark plugs.

When nonresistor spark plugs are installed in such cars, there is some possibility that the electric devices in the car, such as the audio system or the engine management system, would be affected by noise.

# Conversion Chart

## Vergleichsliste

## Tableau de comparaison thermique

## Tabla de conversión equivalencias

## Jämförelsetabell

## Převodní tabulky

**Note:** This chart is furnished as a guide. Due to differences in design, materials, etc., plugs produced by various manufacturers do not have exactly the same heat range. See recommendations sections for specific engine application.

**Anmerkung:** Diese Liste dient nur zur Information. Wegen der Unterschiede von Konstruktion, Werkstoffen usw. haben die Zündkerzen von verschiedenen Herstellern keinen miteinander übereinstimmenden Wärmebereich. Siehe unsere Empfehlungen für die richtige Anwendung der Zündkerzen.

**Notes:** Cette liste est donnée comme guide. A cause de la différence en dessin, matériels etc., les bougies d'allumage produites par divers fabricans n'ont pas exactement la même gamme thermique. Voir section d'affectations pour utilisation exacte.

**Notas:** Este cuadro se sirve de quia. Bujías que se producen por varios fabricantes no poseen exactamente el mismo alcance térmico debido a las diferencias en diseño, materiales etc. Véase sección de aplicaciones para el uso correcto.

**Observera:** Denna tabell är endast avsedd som vägledning. På grund av avvikelser i utförande, material m.m. kan tändstift av olika fabrikat ej ha exakt samma värmetal. Se rekommendations-tabellen för respektive motor.

**Upozornění:** Převodní tabulky slouží pouze pro srovnávací účely. Zapalovací svíčky od různých výrobců nemají kvůli rozdílné konstrukci, použitému materiálu apod. srovnatelný rozsah tepelných hodnot. Pro správný výběr zapalovací svíčky je třeba se řídit doporučeními firmy NGK v aplikačních tabulkách tohoto katalogu.

The screenshot displays the NGK E-Learning interface for 'Spark plugs'. The main content area features a graph titled 'Spark plug temperature (firing end)' showing temperature in degrees Celsius on the y-axis (450, 850, 1000) and engine load on the x-axis (0% to 100%). The graph is divided into three regions: 'Overheating region' (top, red), 'Safety margin' (middle, yellow), and 'Fouling region' (bottom, blue). A 3D character in blue overalls stands next to a red fire extinguisher. Below the graph, there are three buttons labeled 'A hot', 'B optim', and 'C cold', and an 'Engine load' slider.

**The meaning of the heat rating**

The generation of heat varies greatly from engine to engine. For example, a lawn mower will generate less heat than a racing car or a turbocharged engine can run significantly hotter than a naturally aspirated engine.

Therefore a spark plug must be selected that can conduct a precisely defined amount of heat energy to the cylinder head and ensure that the optimal operating temperature range is maintained.

The heat rating of a spark plug provides information about its thermal performance. The following applies for NGK spark plugs: The higher the heat rating number, the higher the thermal performance.

The heat rating number is to be found within the technical part number designation which is marked on the body of NGK's spark plugs (e.g. BK9RES).

The screenshot displays the NGK E-Learning interface for 'Ignition sequence'. The main content area features a diagram of an engine with a distributor and spark plugs. A 3D character in blue overalls stands next to the engine. Below the diagram, there are two buttons labeled 'fast' and 'slow', and a 'Speed' slider.

**Ignition sequence**

In older systems a central ignition coil generates the high voltage necessary for the ignition of the air-fuel mixture.

A mechanical ignition distributor ensures that this voltage is sent to the correct cylinder's spark plug at the right time.

The ignition high voltage is fed through a distributor cap and the ignition HT lead which is connected to the spark plug terminal. From here it reaches the tip of the centre electrode and when sufficient voltage is available to overcome the resistance of the air gap between the centre and ground electrode electrical energy discharges to earth in the form of a spark.

In more modern systems an individual 'cylinder coil' is often fitted directly to each spark plug. With these fully-electronic ignition systems neither mechanical ignition distributors or high-voltage
